Education

South China Normal University | Guangzhou, Guangdong

B.Eng. Candidate in Computer Science and Technology (Junior)

Sep 2023-Present

- Average score: 89.4/100;
- GPA: 3.94/5.00;
- Major ranking: 4/153 (top 2.6%);
- CET-4: 647; CET-6: 571; IELTS: 7.0;
- Honors: First-Class Outstanding Student Scholarship, School of Computer Science, SCNU (2023–2024, 2024–2025); Second Prize, SCNU Undergraduate Innovation Award (2024).

University of British Columbia | Vancouver, Canada

Jul–Aug 2024

International Visiting Student

- Completed Music: An introduction to Electrical & Computer Engineering
- Completed Music Laboratory: Hands on Learning

RESEARCH EXPERIENCE

Targeted Drug Discovery for Epstein–Barr Virus (EBV)

Jul 2025

Advisor: Prof. Sijie Mai, SCNU; in collaboration with the team of Prof. Musheng Zeng, Academician of the Chinese Academy of Sciences, Sun Yat-sen University Cancer Center

- Applied diffusion models to develop targeted drug candidates for the DNA-binding domain (DBD) or other regions of EBNA1 protein.

Multimodal Affective Computing

Jul 2025

Advisor: Prof. Sijie Mai, SCNU

- Conducted multimodal sentiment analysis using pretrained language models and multimodal large language models.
- Two papers are currently under submission to ACM Multimedia, and two first-author papers are under submission to EMNLP. One ACM Multimedia submission received an average score of 3.6 with no negative reviews; it is expected to have a strong chance of acceptance and may have the possibility of being selected as an Oral presentation.

COMPETITION EXPERIENCE

Operating System Design Contest, South China Regional

Jan 2026

- Developed an LLM-driven robotic arm system for board-game playing, with the related software registered as a computer software copyright.

PROJECT EXPERIENCE

Embodied AI Robotic Arm for Board Game Playing

Dec 24

Advisor: Prof. Sijie Mai, SCNU

- Debugged the robotic arm, fine-tuned large language models, and studied robotic control methods for board-game playing tasks such as Gomoku and Go.
- Developed an LLM-driven robotic arm system for autonomous board-game playing.

OTHER INFORMATION

Research Interests: Multimodal Learning, Embodied Intelligence and AI for Science.

Long-term Plan: Pursue graduate study and doctoral-level research in artificial intelligence.
